PROFESSIONAL SUMMARY

Platform Engineer and Site Reliability Engineer with 13+ years of experience building and supporting cloud-native platforms, Kubernetes infrastructure, Infrastructure as Code, CI/CD automation, observability, and developer enablement initiatives. Experienced in Platform Engineering practices including self-service infrastructure, deployment automation, platform standardization, and Internal Developer Platform (IDP) concepts focused on improving developer experience and operational efficiency.

PROFESSIONAL EXPERIENCE

Site Reliability Engineer | Middleware & Platform Engineer

Feb 2023 – Present

Capital Group, Irvine, CA

- Operate and support enterprise Kubernetes/OpenShift platforms hosting mission-critical applications across Development, QA, UAT, and Production environments.
- Manage Kubernetes cluster operations including monitoring, upgrades, patching, node lifecycle management, capacity planning, and platform reliability.
- Monitor Kubernetes clusters, nodes, pods, deployments, namespaces, and platform services to ensure availability, resiliency, and operational stability.
- Maintain highly available cloud-native environments supporting critical business workloads with strong focus on uptime and service reliability.
- Implement proactive monitoring and observability solutions using Prometheus, Grafana, Datadog, Splunk, and OpenTelemetry.
- Supported Platform Engineering initiatives focused on developer self-service, infrastructure automation, CI/CD standardization, and Internal Developer Platform (IDP) adoption.
- Familiar with Backstage concepts including service catalogs, software templates, developer portals, and self-service platform capabilities for improving developer experience.
- Built automation solutions leveraging AWS EC2, Route53, S3, Lambda, and Terraform to improve platform reliability and deployment consistency.
- Utilized Microsoft Copilot and Claude to accelerate development, generate test cases, troubleshoot production issues, and improve code quality.
- Conducted peer code reviews and contributed directly to Python automation frameworks supporting enterprise production platforms.
- Support AWS cloud infrastructure and Kubernetes workloads while ensuring compliance with enterprise operational and security standards.
- Troubleshoot Kubernetes-related issues involving pods, containers, ingress controllers, networking, DNS resolution, storage provisioning, and application deployments.
- Build and maintain Infrastructure as Code solutions using Terraform and Ansible for infrastructure provisioning and configuration management.
- Develop and maintain CI/CD pipelines using Azure DevOps, Jenkins, Git, Nexus, and Harness for automated application deployment and release management.
- Developed and enhanced Python-based automation scripts for infrastructure provisioning, operational workflows, health checks, monitoring, resiliency validation, and deployment automation.
- Implement Kubernetes security best practices including RBAC, certificate management, vulnerability remediation, security patching, and access control policies.
- Perform middleware administration and production support for Oracle WebLogic, JBoss, Apache Tomcat, Kafka, RabbitMQ, and IBM MQ platforms.

- Investigate and resolve middleware connectivity issues involving JMS, JDBC, IBM MQ, Kafka, databases, APIs, and backend systems.
- Analyze JVM performance, garbage collection logs, heap dumps, and thread dumps to identify and resolve performance bottlenecks.
- Generate operational health reports, capacity metrics, reliability dashboards, and platform performance reports.

Middleware / DevOps/ Platform Engineer Jul 2016 – Jan 2023

SDG SOFTWARE INDIA PVT LTD, Noida, India

- Installed, configured, upgraded, and maintained Oracle WebLogic, WebSphere, JBoss EAP, and Apache Tomcat across Development, QA, UAT, and Production environments.
- Automated application deployments, server administration tasks, monitoring, and operational workflows using Shell scripting, Python, and WLST.
- Designed and maintained CI/CD pipelines using Jenkins, Git, and Nexus to streamline software delivery and release management processes.
- Developed Infrastructure as Code (IaC) automation using Terraform and Ansible to standardize environment provisioning and configuration management.
- Collaborated with application development teams to implement DevOps best practices and improve deployment reliability.
- Integrated automated deployment, testing, and validation processes into CI/CD pipelines, reducing manual deployment effort and release risks.
- Participated in application containerization initiatives using Docker and supported migration of traditional workloads toward Kubernetes-based platforms.
- Implemented monitoring and alerting solutions using Prometheus, Grafana, Splunk, and Nagios to improve operational visibility and faster incident detection.
- Administered and supported JBoss EAP environments in standalone and domain modes across enterprise production environments.
- Performed production support, incident management, root cause analysis, and troubleshooting for critical enterprise applications and platform services.
- Managed Linux server environments supporting middleware, DevOps, and application platforms.
- Performed JVM tuning, capacity planning, performance optimization, heap dump analysis, thread dump analysis, and log analysis.
- Implemented high-availability clustering, load balancing, failover strategies, and disaster recovery solutions for enterprise middleware environments.
- Managed SSL certificates, security hardening activities, platform patching, vulnerability remediation, and compliance requirements.
- Supported cloud adoption initiatives and automation strategies leveraging AWS services and infrastructure automation frameworks.
- Worked closely with infrastructure, networking, database, and security teams to support enterprise production deployments.
- Created operational documentation, deployment procedures, support runbooks, and knowledge base documentation.

Linux Administrator / Middleware Engineer Apr 2015 – Jun 2016

FRANCONNECT INDIA SOFTWARE PVT LTD, Noida, India

- Administered Linux servers and middleware environments supporting enterprise applications.
- Built and maintained WebLogic clusters and high-availability environments.
- Automated routine Linux and middleware administrative activities using Shell scripting.

- Implemented application monitoring, operational health checks, and deployment automation.
- Supported middleware patching, maintenance, troubleshooting, and production operations.

IT Associate Aug 2013 – Mar 2015

RISING REALITY, Noida, India

- Administered Linux servers and web application environments.
- Automated routine operational tasks using Shell scripts and scheduled jobs.
- Supported application deployments, production monitoring, troubleshooting, and maintenance activities.
- Assisted in server administration, system monitoring, and incident resolution.

EDUCATION

Bachelor of Electronics & Communication Engineering

Millia Institute of Technology, Purnia, India

TECHNICAL SKILLS

Cloud: AWS (EC2, ECS, Lambda, SQS, S3, EFS, RDS, Route53, Application Load Balancer, Network Load Balancer, IAM, VPC, Security Groups, Auto Scaling, CloudWatch)

Container & Platform Technologies: Kubernetes, OpenShift, Docker, EKS, AKS, Container Orchestration

Infrastructure as Code: Terraform, AWS CloudFormation, CloudFormation YAML, Ansible, AWX

CI/CD & DevOps: Jenkins, Azure DevOps, GitHub Actions, Git, GitHub, Nexus, Harness, CI/CD Automation

Site Reliability Engineering: Incident Management, Incident Response, Root Cause Analysis (RCA), Production Support, Service Monitoring, Platform Reliability, Capacity Planning, SLI/SLO Awareness, MTTR Reduction, Runbook Development

Platform Engineering: Internal Developer Platform (IDP) Concepts, Developer Self-Service, Developer Experience (DevEx), Backstage (Conceptual Knowledge), Service Catalogs, Platform Automation

Observability & Monitoring: Prometheus, Grafana, Splunk, Datadog, Open telemetry, Nagios, Alerting, Dashboard Development, Log Analysis

Workload Automation: AutoSys WLA, WCC, AutoSys Agents, Job Scheduling, Batch Processing, Agent Installation & Configuration, Platform Upgrades, Workload Monitoring

Messaging: Kafka, RabbitMQ, IBM MQ

Middleware: WebLogic, WebSphere, JBoss, Apache Tomcat

Operating Systems: Linux (RHEL, CentOS, Ubuntu), AIX, Windows

Scripting: Python, Shell Scripting

Security: SSL/TLS, Certificate Management, Vulnerability Remediation, Security Hardening, Patch Management, Container Security, Kubernetes Security, CVE Remediation

CERTIFICATIONS

Certified Kubernetes Administrator (CKA)

Certified Kubernetes Application Developer (CKAD)

AWS Certified Solutions Architect – Associate

HashiCorp Terraform Associate

Oracle Certified Associate

Red Hat Certification

Core Java Certification

AI-ASSISTED ENGINEERING EXPERIENCE

- Utilize Microsoft Copilot and Claude AI throughout the software development lifecycle including design assistance, automation development, code generation, testing, troubleshooting, root cause analysis, and documentation generation.
- Leverage AI-assisted engineering techniques to improve delivery velocity, reduce development effort, enhance code quality, and accelerate operational support activities.
- Promote responsible adoption of AI capabilities while maintaining enterprise security, compliance, governance, and operational standards.

CLOUD, PLATFORM & DISTRIBUTED SYSTEMS HIGHLIGHTS

- 13+ years supporting enterprise-scale distributed systems and mission-critical production platforms.
- Extensive experience with AWS cloud platforms, Kubernetes, OpenShift, Infrastructure as Code, and DevOps automation.
- Strong expertise in platform reliability, resiliency engineering, disaster recovery, failover strategies, and operational excellence.
- Supported Internal Developer Platform (IDP) initiatives by enabling standardized infrastructure provisioning, CI/CD automation, Kubernetes platform services, and developer self-service capabilities.
- Familiar with Backstage concepts including service catalogs, developer portals, software templates, golden paths, and self-service platform workflows.
- Hands-on experience with distributed messaging platforms including Kafka, RabbitMQ, and IBM MQ.
- Proven success leading cloud modernization, automation, observability, and platform engineering initiatives.
- Experienced supporting large-scale application environments with stringent availability, scalability, and security requirements.

CERTIFICATIONS

- Certified Kubernetes Administrator (CKA)
- Certified Kubernetes Application Developer (CKAD)
- AWS Certified Solutions Architect – Associate
- HashiCorp Terraform Associate
- Oracle Certified Associate
- Red Hat Certification
- Core Java Certification
